DETAILED ACTION

This action is responsive to applicants' Appeal Brief received July 21, 2004.

Claims 18-23 are currently pending.

Response to Arguments

1. In view of the Appeal Brief filed on July 21, 2004, PROSECUTION IS HEREBY REOPENED. A new ground of rejection is set forth below.

To avoid abandonment of the application, appellant must exercise one of the following two options:

- (1) file a reply under 37 CFR 1.111 (if this Office action is non-final) or a reply under 37 CFR 1.113 (if this Office action is final); or,
- (2) request reinstatement of the appeal.

If reinstatement of the appeal is requested, such request must be accompanied by a supplemental appeal brief, but no new amendments, affidavits (37 CFR 1.130, 1.131 or 1.132) or other evidence are permitted. See 37 CFR 1.193(b)(2).

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 18-23 are rejected under 35 U.S.C. 103(a) as being unpatentable over Smith et al, US 5,746,776.

Smith et al teach a dry cleaning kit for in-dryer use comprising a containment bag containing an interior surface which is impregnated with an effective amount of a dry cleaning composition (see abstract). The bag may have multiple layers, the outermost being a vapor impermeable barrier and the inner layers having the dry cleaning composition absorbed thereto (col. 10, claim 1). The dry cleaning compositions comprise as much as 95% water, as much as 32% organic solvent, and as little as 1% nonionic surfactant (col. 10, claims 1-3). Suitable organic solvents of the invention include C2-C4 diols and ethylene glycol (col. 5, lines 51-60). It would have been obvious to one of ordinary skill in the art to use a diol or ethylene glycol as the organic solvent in the dry cleaning compositions of Smith et al as such solvents are taught as preferred in their compositions. With respect to the amount of the composition to be absorbed to the substrate, note that Smith et al teach an effective amount of dry cleaning composition for absorption in the substrate. It is obvious to one of ordinary skill in the art not to use too little composition, as that would make for ineffective cleaning, and not to use too much, as that might result in unwanted residues and would not be cost effective. Also note that the composition, surface area and thickness of the substrate in question will dictate how much cleaning solution should be applied. As all of these parameters are not defined, the amount of cleaning composition applied to the substrate is not a patentably distinct limitation. Even if all these parameters

are defined however, the examiner still maintains that one of ordinary skill in the art would know what an effective amount is and that it would fall within applicants' range.
